FFV's Omega DVR With HD

FFV's flagship high-end Omega deck DVR is now available with HD. The new Omega HD can record either SD or HD video with high-quality JPEG 2000 compression up to 300 Mbps. Users can simultaneously record, play and store multiple SD and HD video files, plus create video clips, loops and playlists. The Omega HD offers an LCD screen for viewing video content, uses standard removable SATA drives, and can upscale recordings from FFV's Xi deck or NDT 200 to HD. The recorder's file formats are compatible with Grass Valley, and offer accurate frame control via RS-422 or Ethernet using standard control protocols. The new Xi Series is a new multi-use DVR delivering broadcast-quality digital video in either single- or dual-channel models, offering fixed or removable SATA hard drives, optional SDI, full variable-speed playback control, and USB 2.0 download ports. Indicate 228 on Fast Facts card or visit <http://scn.hotims.com>.
